

Application Security Posture Management

Map and Secure every App, Service, API, and PII Data Flow.

Agentless. Automated. Continuous.

Bionic creates a complete application security posture of applications running in production that maps all services, APIs, dependencies, attack surfaces, and data flows into a real-time architecture map.

Bionic integrates with your SCA (e.g. Snyk) and CSPM tools (e.g. Wiz, Prisma, Lacework) to unify and contextualize all your security alerts.

APPLICATION & API SECURITY

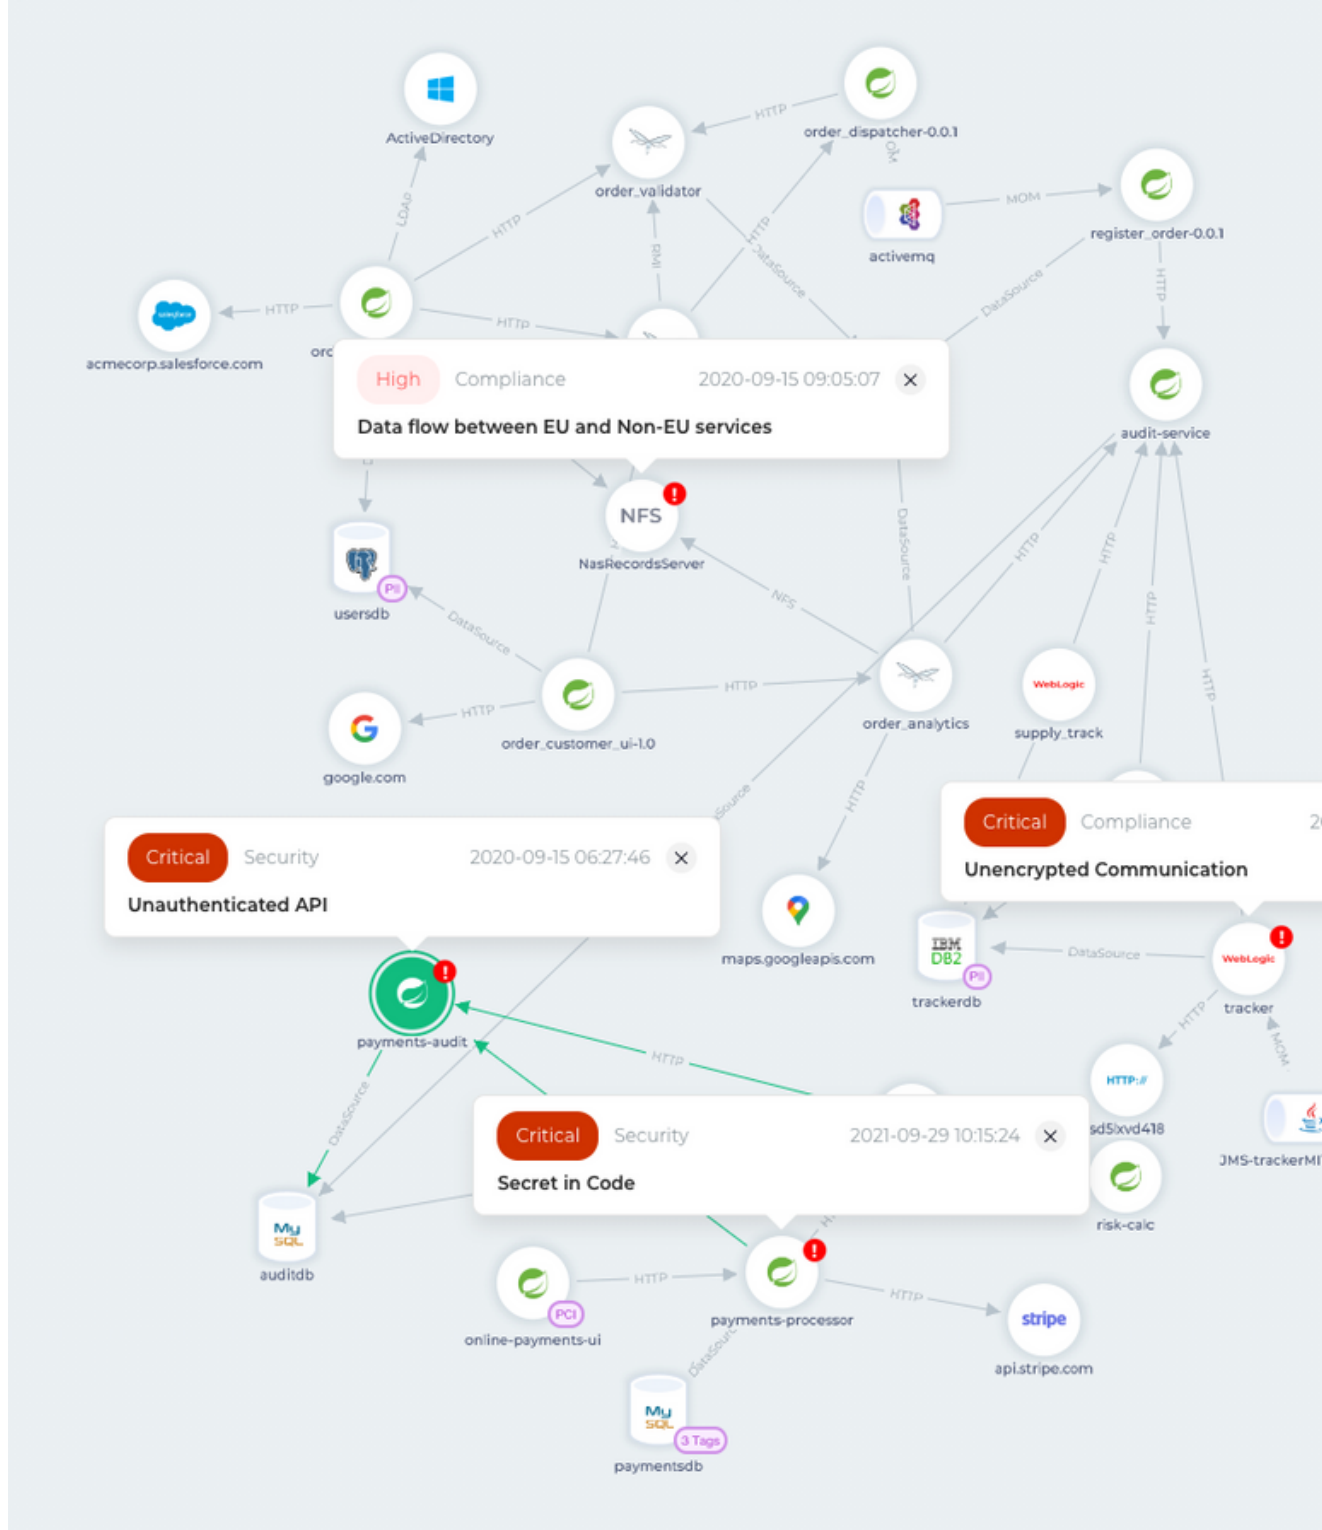

Discover, map, and catalog all your application and API dependencies so you detect every exploitable CVE, attack surface, and threat.

DATA PRIVACY & COMPLIANCE

Discover, map, and secure all your PII, PCI, and PHI data flows within your applications for GDPR, CCPA, and PCI compliance.

ARCHITECTURE DRIFT

Baseline and govern application architecture drift as developers continuously deploy using their CI/CD pipelines.

BIONIC

Bionic has developed an agentless approach that establishes a baseline inventory of application components and their configurations, thus providing much-needed visibility into complex and rapidly changing applications – including their service dependencies, data flows, and architectural drift.

AGENTLESS

Integrates and scales across all your cloud providers, applications, and environments.

CONTINUOUS

Triggered by any new CI/CD deployment or change to the application.

CLOUD AGNOSTIC

Works across AWS, Azure, GCP, and On-Premises data centers in addition to supporting traditional, containerized, and serverless applications.

Bionic Overview

INTEGRATES IN 4-5 MINS

Bionic uses an agentless approach to integrate with your cloud providers, apps and DevOps tools in minutes.

ARCHITECTURE MAPS & DATA FLOWS

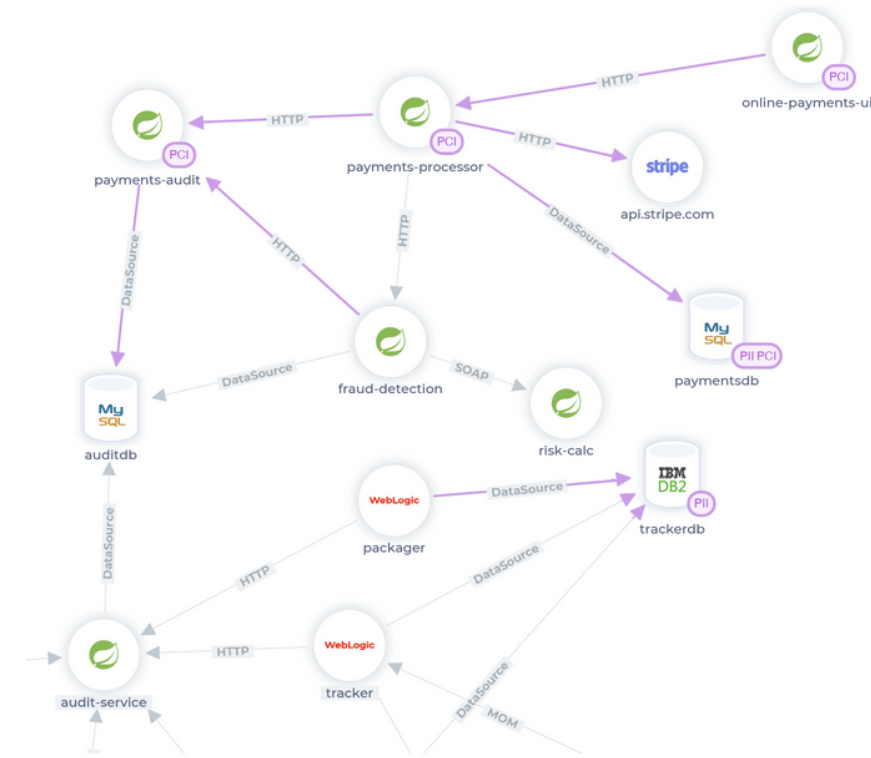

Bionic builds a complete real-time application architecture map of all application services, APIs, dependencies, and sensitive data flows.

APPLICATION SECURITY POSTURE

Bionic applies risk scoring to every application architecture, attack surface, and exploitable vulnerability that exists in production. Bionic also integrates with your SCA and CSPM tools to unify and contextualize your security risks with application context.

AUTOMATE DEVOPS WORKFLOWS

Bionic integrates with all CI/CD pipelines and DevOps tools like Azure DevOps, JIRA, and ServiceNow.

Trusted By

BIONIC.AI

Bionic Application Security Posture Management (ASPM) provides real-time visibility into the security, data privacy, and operational risk of cloud applications running in production at scale. Bionic provides a continuous, complete, and comprehensive risk profile of an application architecture that includes all services, APIs, dependencies, attack surfaces, and data flows.
